12.02.2026

TO WHOM SO EVER IT MAY CONCERN

This is to inform that Mrs.Thilagam.R, 60 years old female (Hos.No: 1254554) a case of **"Acute Lymphoblastic Leukemia"** and admitted in our hospital for further management. Mr.R.Dhanasekaran(Son) was stayed along with her as a care taker from 25.1.2026.

M.D. D.M.

Dr.T.Kasi Viswanathan, MBBS,MD,DM,(Haematology-CMC Vellore)
HOD & Consultant - Haematology and Bone marrow Transplantation,
MMHRC,
Madurai.

Dr. KASI VISWANATHAN
M.B.B.S., M.D., D.M. (Haematology)
Senior Consultant & Head
Department of Haematology and Bone marrow Transplantation
Regd. No. 69570
Meenakshi Mission Hospital and Research Centre
Lake Area, Melur Road, Madurai - 625 107.

HISTOPATHOLOGY

BIOPSY TYPE - I

BIOPSY NO	S861/2026
SITE	Bone marrow
PROCEDURE	Bone marrow biopsy
CLINICAL NOTES AND DIAGNOSIS	C/o bilateral leg pain since 1 month, tiredness+ on evaluation, pancytopenia. ? Acute leukemia
METHOD	H&E
MACROSCOPIC APPEARANCE	Received 1 bit, greyish white to greyish brown, measuring 0.5cm in length - A/E.
MICROSCOPIC APPEARANCE	Sections studied show hyaline cartilagenous tissue with 2 marrow spaces showing procedural hemorrhage. One space shows sheets of atypical cells with crush artefact. Erythropoiesis, granulopoiesis, megakaryopoiesis decreased.
IMPRESSION	2 MARROW SPACES WITH SHEETS OF ATYPICAL CELLS (BLASTS) AND PROCEDURAL HAEMORRHAGE. SUGGESTIVE OF LEUKEMIA.
	Comment: Kindly correlate with clinical features and other lab parameters, bone marrow aspiration/flow cytometry report.

Note : Report given is only an opinion. Kindly correlate with clinical features, always get second opinion, if any controversial diagnosis is suspected.

FLOWCYTOMETRY REPORT

ACUTE LEUKEMIA PANEL

Method: Immunophenotyping

Specimen Studied : Bone marrow sample

Flow cytometer used	**BD - FACS Canto II**
Lysing Reagent used	**FACS LYSE**
Gating strategy	**CD45/SSC**
Fix and Perm used	**PERM2 REAGENT**
No. of tubes processed	**4**
No.of events acquired per tube	**50000**

Common Antigen	Result	%	Expression
CD45 SIDE SCATTER BLASTS	POSITIVE	88.2%	DIM
NON LINEAGE MARKERS			
CD34	NEGATIVE	---	---
CD38	POSITIVE	68.1%	MODERATE
HLA DR	POSITIVE	94.6%	BRIGHT
MYELOMONOCYTIC MARKERS			
MPO	NEGATIVE	---	---
CD117	NEGATIVE	---	---
CD13	NEGATIVE	---	---
CD33	NEGATIVE	---	---
CD64	NEGATIVE	---	---
CD14	NEGATIVE	---	---

MEENAKSHI LABS
VEGAMAE VIVEGAM

B LYMPHOID MARKERS			
CD19	POSITIVE	89.5%	BRIGHT
CD10	POSITIVE	64.9%	BRIGHT
CD20	POSITIVE	98.2%	BRIGHT
CD22	POSITIVE	92%	BRIGHT
CD58	POSITIVE	73.8%	BRIGHT
TSLPR	POSITIVE	73.85	MODERATE
T LYMPHOID MARKERS			
Cy CD3	NEGATIVE	---	---
Sur CD3	NEGATIVE	---	---
CD7	NEGATIVE	---	---

DESCRIPTION	Gated population of blast cells (88.2%) show low SSC/dim CD45. Positive expression of CD10, CD19, CD20, CD22, CD38, CD58, HLADR and TSLPR noted. Co expression of CD10 and CD19 is seen in 73% of the blast cells. All other markers show negative expression. **IMPRESSION:** The scatter parameters and antigen expression profile studied are consistent with **B cell Acute Lymphoblastic Leukemia (B ALL)**.

NOTE: Kindly correlate clinically and with bone marrow studies.

ROUTINE HAEMATOLOGY & COAGULATION

BONE MARROW SMEAR STUDY

Specimen: Bone marrow

Methodology: Light microscopic giemsas stain

BMA NO	B93/2026
CLINICAL HISTORY	C/o bilateral leg pain x 1month. Tiredness+, pancytopenia +. ? Acute leukemia.
PERIPHERAL SMEAR STUDY	RBC - Hypochromic microcytic, elongated cells. NRBC - 5/100WBC. No hemoparasites WBC - Counts decreased. Neutropenia, 32% atypical blastoid cells.
DIFFERENTIAL COUNT	Atypical blastoid cell - 32% Neutrophils : 06% Lymphocytes : 62%
PLATELETS	Counts decreased. Normal morphology.
BONE MARROW	Cellularity - Particulate. Erythropoiesis - Decreased. Leucopoiesis - Increased. 76% Blasts noted. Blasts are large sized with fine chromatin, 1 -2 conspicuous nucleoli, moderate cytoplasm showing few granules. Megakaryopoiesis - Decreased.
BMA DC	Erythroid cells - 05% Blasts - 76% Polymorphs - 01% Lymphocytes - 18% MPO - Negative
IMPRESSION	SUGGESTIVE OF ACUTE LEUKEMIA, MPO - NEGATIVE. Comment - Kindly correlate with clinico-radiological features.

CYTOPATHOLOGY

CYTOLOGICAL EXAMINATION (CSF)

CYTOLOGY NO	C467/2026
SITE	CSF cytology
PROCEDURE	Lumbar puncture
CLINICAL NOTES AND DIAGNOSIS	Recently diagnosed as B cell ALL strated on steroids. To look for CNS involvement.
METHOD	PAP, MGG and H&E.
MACROSCOPIC APPEARANCE	Received 100µl of colorless fluid
MICROSCOPIC APPEARANCE	Smears screened show scant cellularity. Occasional mature lymphocytes seen. No atypical cells seen in the material received.
IMPRESSION	CSF CYTOLOGY - NEGATIVE FOR MALIGNANT CELLS

Note : Report given is only an opinion. Kindly correlate with clinical features, always get second opinion, if any controversial diagnosis is suspected.

FLOWCYTOMETRY REPORT

Ploidy Analysis

Sample : EDTA sample of bone marrow.

Methodology : Flow cytometric (FC) DNA ploidy.

Ploidy status : HYPODIPLOIDY(0.78)

Clinical use :

Risk stratification of hematolymphoid neoplasms.

Interpretation :

- Diploidy : > 0.95 - < 1.06.

- Hypoploidy : </ = 0.95

- Hyper ploidy : >/ = 1.06.

Reference : Tembhare, P., Badrinath, Y., Ghogale, S., and Subramanian, P.G. 2017. Method for DNA ploidy analysis along with immunophenotyping for rare populations in a sample using FxCycle violet. Curr. Protoc. Cytom. 80:6.38.1-6.38.15. doi: 10.1002/cpcy.15.
